

BIODEGRADABLE PRODUCTS

BIODEGRADABLE BAGS & PACKAGING PTY LTD

TOGETHER WE CAN MAKE A DIFFERENCE

Biodegradable Bags and Packaging Pty Ltd supplies a range of products which are biodegradable and compostable, and comply with Australian and European standards for both commercial and home compostability.

Our products differ greatly from those described as degradable. Degradable plastic products simply have an additive which over time will break the product up into smaller pieces. These pieces may then take many decades to disappear.

All our products are manufactured in Victoria from vegetable starch which is a renewable and sustainable resource. This is unlike traditional plastic bags which use petroleum based resources in their manufacture (the latter resulting in high greenhouse emissions).

Our products will perform like standard plastic products in that they will have a normal shelf life; however, they are designed to break down in the presence of micro-organisms found in landfill, compost and in fresh and salt water.

Our Products:

SAMPLE / CARRY BAG: May be printed to advertise your organization and carry an environmental message to show you care. Available in a range of sizes and thickness.

BARRIER / SECURITY TAPE: This tape uses only biodegradable material in its manufacture. It can be produced in a range of colours, sizes and thickness. Each roll carries a continual small green random message which is easily seen and states "Biodegradable Tape". The intention is to show the user is making a genuine effort to assist the environment.

GARBAGE / BIN LINERS: Available in a range of sizes and thickness. Each bag carries a message describing its environmentally friendly nature. Dispose of the bag with peace of mind.

TREE & SHRUB GUARD: For protection against animals and weather. These guards are perfect for bulk plantings and are available in a range of sizes and thickness. Printing is available on request and should include a message about your environmental awareness. For remote area plantings, these guards will biodegrade over time and leave only the supporting stakes to be conveniently collected and reused.

SINGLET / SHOPPING BAG: A strong bag that can be disposed of with comfort. May be printed as required to show your organization is attempting to make a difference. Your choice of size and thickness.

"Clean Up Australia" and "Planet Ark" Suggest:

That just under 21,000 tonnes of plastic are disposed of in landfill sites throughout Australia every year.

Plastic bags have a lifespan of between 20 and 1000 years and in Australia, we use around 7 billion plastic bags annually.

On average, all Australian capital cities will reach present landfill capacity by 2010.

Estimates that 100,000 whales, seals and other marine creatures are killed each year by plastic bags that end up on our beaches and in our waterways.

BIODEGRADABLE BAGS & PACKAGING PTY LTD

PACKAGING PRODUCTS

We are attempting to stock as many environmentally friendly packaging items as practical which include all types of biodegradable and compostable bags (garbage, shopping, dog waste, bin liners, etc.), tree and shrub guards and barrier tape.

All these items are made from vegetable starch and negate the need for plastic.

We also appreciate that technology as yet does not allow for all packaging products to be environmentally friendly, so we naturally stock a full range of standard products as detailed below.

*Together we can make
a difference*

*For very competitive pricing
and prompt service, please call
Peter or Tim.*

Stretchwrap:

Hand rolls
Machine rolls
Dispensers

Bubblewrap: *(All biodegradable)*

Industrial and office rolls
Protective envelopes
